12V 38AMP
sealed gel

User weight limit
135kg

Speed
Max 6km/h

+ Compact and Manoeuvrable

One of the daily difficulties powerchair users encounter is manoeuvring in and through tight spaces like doorways and elevators. Most standard powerchairs are 25" wide and given that some doorways are as narrow as 28" or smaller, it's a tight squeeze getting through those doorways. The KP-25.2 is a compact medium-size powerchair with an overall width of up to 27", meaning it is easier to manoeuvre around tight corners and through narrow doorways.
