

# Dictus Hip

Helps Hip and  
Ankle Flexors  
with Power.

Dictus Hip is suitable for people with weak hip flexors, such as individuals with Multiple Sclerosis (MS) or that had a Stroke, and who have general weakness in their leg(s).

Dictus Hip consists of a comfortable hip belt and an elastic rubber band that is attached either to the thigh piece (Dictus Hip-Knee) or to the foot piece (Dictus Hip-Foot), depending on the user's needs.

The construction assists with lifting the leg when walking, helps the user's balance and ability to move safely.

The rubber bands assist with flexion of the hip. The level and pull direction of the assistance can be easily adjusted to suit the user's needs. It is easy to alter flexion, adduction and the pull direction of inward rotation. If Dictus Hip-Foot is used, foot inversion can also be corrected.

## Benefits:

- Helps the user getting the leg into the swing phase of the step, giving them a better gait.
- Provides direct feedback of results.
- Can be worn over ordinary clothing or under loose clothing.
- Universal and can be used on one or both legs.
